

AI Data Services & BPO

Enterprise Partnership Proposal · 2026

80+ Certified Specialists	15+ Independent QA Reviewers	100% QA Coverage	90%+ Accuracy Target	40–70% Cost vs US/EU
------------------------------	---------------------------------	---------------------	-------------------------	-------------------------

Baraka Digital Hub is a tool-agnostic AI data operations and business process outsourcing partner. We function as a managed execution layer for AI systems and data-heavy enterprise operations — integrating directly into client infrastructure without requiring workflow redesign. Our focus is not task completion, but repeatable, auditable, scalable production systems for AI and data operations, at 40–70% of the cost of US and EU providers.

What Baraka Digital Hub Does

BDH operates a layered execution architecture across three service pillars — combining a modality-specialized workforce, platform-agnostic tooling integration, and an independent QA system to deliver production-grade outputs at scale.

Pillar 1 — AI Data Services	Modality-specialized annotation and data operations
Computer Vision Annotation	Bounding box annotation for object detection · Semantic & instance segmentation · Keypoint & pose estimation · Image classification & tagging · 3D point cloud annotation · Video object tracking
Language AI / NLP	Named entity recognition (NER) · Sentiment & intent labeling · Text classification & categorization · Question-answer pair generation · Dialogue annotation · Language model evaluation · Document review & indexing
Audio & Speech Processing	Verbatim & clean-read transcription · Speaker diarization & identification · Audio classification & tagging · Phonetic & accent annotation · Keyword spotting · Timestamping · Subtitle & caption generation · Transcription QA

Data Operations	Data collection, cleaning & validation · Enrichment & categorization · Structured data transformation · Content moderation · Quality assurance
Pillar 2 — Human-in-the-Loop AI Human intelligence across the full AI training lifecycle	
LLM Training & RLHF	Human preference ranking (RLHF) · Instruction-following evaluation · Response quality assessment · Factuality & hallucination review · Red-teaming & safety evaluation · Multilingual prompt refinement
Model Output Review	Evaluating AI-generated responses for accuracy, safety, tone, and policy compliance · Ground truth creation · Benchmark dataset building · Data auditing
Content Moderation	Text, image, and video review against safety and policy guidelines · Harm, toxicity, and risk classification · Multi-category policy enforcement
Pillar 3 — BPO & Back-Office Services Structured operational execution for enterprise workflows	
Data Entry & Processing	High-volume data entry · Document processing & extraction · Form completion · CRM data entry · Back-office data operations
Research & Virtual Assistance	Web research & structured data extraction · Lead generation & list building · Competitive analysis · CRM updates · Administrative data operations
Customer & Email Support	Email and customer support handling · Ticket triage · Query handling · Escalation management · Response drafting

Why Baraka Digital Hub Is Different

A Partner, Not a Platform

You get a named Project Manager, dedicated Team Leads, and a fixed workforce cohort trained specifically on your requirements. The same people, the same standards, every engagement — not a pool of random workers allocated at volume.

100% Independent QA on Every Output

We review everything — not a sample, not a spot-check. Our QA team is structurally separated from production with no shared management, ensuring objectivity. This is not industry standard. It is ours.

Transparent Operations — No Black Box

You receive daily progress reports, error logs, IAA scores, and direct access to your Project Manager throughout every engagement. You always know exactly what is happening, what has been reviewed, and what is being corrected.

40–70% Cost Advantage

Enterprise-grade operational quality at Nairobi rates. You receive a fully managed service — PM, QA, reporting, and workforce — at a fraction of the cost of US or EU providers, without compromising on governance or accuracy.

Social Impact Built Into Every Contract

70–80% of every dollar flows directly to youth wages in Kayole, Nairobi. 5–10% funds Baraka’s basic needs programmes and wider community initiatives. Every engagement is a measurable, reportable ESG investment.

Our Four-Layer Operational Model

Every BDH engagement — regardless of service type — runs through the same structured four-layer model. This is what makes us operationally reliable at scale, not just on individual tasks.

01 Project Management

A dedicated Project Manager owns your engagement end-to-end — translating your requirements into operational workflows, managing timelines, enforcing SLAs, and serving as your single accountable point of contact throughout.

02 Team Lead Coordination

Team Leads manage daily execution: allocating tasks, resolving edge cases in real time, monitoring throughput, and performing first-level screening before QA. Issues are surfaced and resolved before they reach you.

03 Certified Production Workforce

Every specialist is onboarded, trained, and certified for your specific task type (minimum 95% pass rate) before touching live work. Performance is tracked continuously and underperformers are replaced before they impact your output.

04 Independent QA System

Our QA team is structurally separated from production — no shared management, no conflict of interest. 100% of outputs reviewed. Errors classified (critical / major / minor), root-cause analysed, corrected within 24 hours. IAA metrics tracked per project.

Platform Integration & Tooling

BDH integrates directly into client environments and industry-standard platforms. Tooling is treated as a deployment layer, not a dependency — we work within your existing infrastructure without requiring workflow redesign.

Computer Vision Platforms	Labelbox · Scale AI · Encord · CVAT · Label Studio · SuperAnnotate
NLP & Text Platforms	Prodigy · Doccano
Speech & Audio Infrastructure	OpenAI Whisper · Google Cloud Speech-to-Text · AWS Transcribe
AI / ML Infrastructure	Hugging Face · Databricks

Client & Proprietary Systems	Client-owned tools · Internal ML pipelines · API-based workflows · Secure enterprise systems
------------------------------	--

Platform Onboarding Process

1	Workflow Mapping Schema definition, guideline documentation, QA rules, and task specification review.
2	Environment Setup Access provisioning, security alignment, SOP configuration, and platform onboarding.
3	Pilot Execution Accuracy and throughput validation under live conditions before full production ramp.
4	Production Scaling Full deployment with continuous monitoring, reporting, and scaling as volumes grow.

Output Delivery Formats

Annotation Formats	JSON · COCO · JSONL · CSV · XML · Pascal VOC
Delivery Channels	Platform export · API pipeline · Cloud storage · Secure file transfer
Aligned To	AI training pipelines · Model evaluation workflows · Production deployment systems

AI Workflow Examples

The following examples illustrate how BDH executes common AI data workflows — showing the input, human execution steps, and output for each task type.

RLHF — Preference Ranking	
Prompt	"Summarize this complaint professionally"
Task	Response A vs Response B comparison by trained evaluator
Evaluation	Helpfulness, tone, factuality, safety — scored per rubric
Output	Ranked preference with justification notes, ready for model training
NLP — Named Entity Recognition	
Input	"Safaricom launched M-PESA in Nairobi yesterday"
Annotation	Safaricom ORGANIZATION · M-PESA PRODUCT · Nairobi LOCATION · yesterday TEMPORAL

QA	Cross-annotator consistency check and edge-case review
Output	Structured NER dataset in JSONL format, QA-validated

Computer Vision — Object Detection

Input	Video frames from traffic camera footage
Annotation	Frame-level bounding boxes · Class assignment (car, bus, motorcycle, pedestrian) · Occlusion tagging
QA	Independent QA validation of all frames · IAA score computed
Output	COCO-format annotated dataset, delivery-ready for model training

Business Continuity

BDH maintains operational continuity safeguards to ensure consistent delivery against client SLAs, regardless of local infrastructure conditions.

Power Redundancy	Backup power systems and alternate workspaces ensure uninterrupted operations.
Internet Redundancy	Dual ISP configuration with mobile data failover — no single point of network failure.
Workforce Fallback	Distributed workforce model with rapid replacement pipeline for team continuity.
Surge Capacity	Extended hours and weekend execution available for urgent delivery requirements.
SLA Protection	All continuity measures are documented and available for client review on request.

The BDH Pilot

We are not offering a trial task. We are offering a trial partnership.

The purpose of our pilot is not simply to demonstrate task completion. It is to show how Baraka Digital Hub becomes a reliable extension of your team — through structured project management, independent quality assurance, transparent communication, and scalable delivery capabilities. Whether the engagement involves AI training data, content moderation, transcription, customer support, research, or back-office operations, the objective is the same: deliver measurable business value while building a foundation for long-term success.

At Baraka Digital Hub, we believe long-term outsourcing partnerships should be built on demonstrated performance, operational compatibility, and measurable results. Rather than asking clients to commit to large production volumes immediately, we offer a structured Pilot designed to

evaluate how BDH integrates with your workflows, quality expectations, communication processes, and business objectives — at low risk and low cost.

What the Pilot Evaluates

Quality & Accuracy	Output accuracy against your defined benchmarks and quality standards.
Communication Responsiveness	Response time, clarity of updates, and proactive issue flagging.
Workflow Compatibility	How smoothly BDH integrates into your tools, processes, and systems.
Team Scalability	Whether the team can absorb increased volume without quality degradation.
Reporting & Transparency	Completeness and clarity of daily updates, QA reports, and metrics.
Security & Compliance	Adherence to your data handling policies and access control requirements.
Platform Integration	Ability to work within your proprietary tools, platforms, or environments.
Adaptability	How effectively the team adjusts to evolving requirements mid-engagement.

Pilot Structure

- 1

Discovery & Planning

Client requirements reviewed and documented. Success criteria defined. Workflow mapped. Quality benchmarks aligned. Access setup completed if required. All documentation signed off by client before any team is assembled.
- 2

Team Training & Certification

The agreed number of pilot taskers are selected and trained specifically on client requirements, guidelines, and documentation. No tasker touches live work until they have demonstrated understanding of the client's quality bar and task specifications. Team Lead and QA Reviewers are briefed in parallel.
- 3

Pilot Execution

The trained team executes the agreed pilot scope under full BDH operational structure: Project Manager overseeing delivery, Team Lead coordinating daily execution, and Independent QA Reviewers validating 100% of output — the same framework used in full production engagements.

4 Performance Review & Production Roadmap

Upon completion, the client receives: completed deliverables, full quality assessment report, throughput metrics, IAA scores, operational recommendations, scalability assessment, and a production engagement roadmap — ready to activate if the pilot meets agreed objectives.

Pilot Scope

Pilot size is determined by project requirements, not a fixed formula. Scope may include any of the following, individually or in combination:

- Sample datasets or limited-volume production batches
- AI training and evaluation task sets
- Customer support or content moderation queues
- Transcription assignments across one or more audio types
- Research or data gathering projects
- Administrative or back-office support functions
- Multi-service workflows combining two or more BDH capabilities

Transition to Production

If the pilot meets agreed objectives, BDH develops a production deployment plan that outlines staffing levels, quality control structures, reporting cadences, integration requirements, and scaling milestones for the full engagement. Production ramp begins only on your signal. There is no automatic rollover, no lock-in, and no pressure to proceed until you are satisfied.

Pilot Pricing

Pilot pricing is scoped based on task type, complexity, and required team size. In most cases, a representative pilot costs significantly less than one day of production work at full scale. A pilot scope and cost estimate are provided within 24 hours of the discovery call — with no obligation to proceed.

SLA & Operational Commitments

Metric	Standard	Enterprise
PILOT PHASE		
Discovery & Planning	24 hours	24 hours
Team Training & Certification	Depends on complexity	Depends on complexity
First Deliverables	Per agreed scope	Per agreed scope
PRODUCTION ENGAGEMENT		
Initial Response Time	< 4 hours	< 1 hour
QA Coverage	100%	100%
Accuracy Target	90%+	90%+

Metric	Standard	Enterprise
Progress Reporting	Daily summary	Real-time dashboard
Error Resolution	< 48 hours	< 12–24 hours
Onboarding to Production	Within 1 week	Within 1 week

About Baraka Digital Hub

Baraka Digital Hub is based in Kayole, Nairobi, Kenya. We were built to deliver world-class AI data operations capability from Africa — while generating sustainable employment pathways for youth in the Baraka community. We operate a dual mandate: deliver enterprise-grade AI data services globally, and build structured employment and training pipelines locally.

Unlike traditional outsourcing firms, BDH is built around workforce development and production-grade execution — not task outsourcing. Our operational model applies the same governance, QA discipline, and management structure to every engagement, regardless of size or service type.

Location	Kayole, Nairobi, Kenya
Contact	projects@barakadigitalhub.com +254 769 258 118
Website	www.barakadigitalhub.com
Team Size	80+ certified production specialists, 15+ independent QA reviewers
Services	AI Data Services, Human-in-the-Loop AI, BPO & Back-Office Operations
References	Available on request — client references, sample QA reports, and annotated dataset examples

Data Security & Confidentiality

BDH understands that AI training data, business process information, and client content are often sensitive, proprietary, or subject to regulatory requirements. We apply the following practices to every engagement:

Non-Disclosure Agreements	NDA's are signed by BDH and all team members assigned to your project before any data or documentation is shared. Custom NDA templates are accepted.
Role-Based Access Control (RBAC)	Only team members assigned to your project are granted access. Least-privilege principles are enforced. Access is role-segmented and revoked upon project completion.

Secure, Segmented Environments	Each client project operates in a segmented environment. No cross-project data access. Secure transfer protocols applied to all data movement.
Audit-Logged Workflows	Full audit trails are maintained for all task execution, access events, and QA actions. Logs are available to the client on request.
Data Handling & Retention	Client data is used exclusively for the agreed task scope. No unauthorized dataset retention. All client data securely deleted upon project completion or client request, with written confirmation provided.
GDPR-Aware Principles	BDH applies GDPR-aware data handling principles across all engagements. Client-specific compliance frameworks are supported and documented in the SOW.
Secure Platform Integration	When working within client-provided tools, BDH follows all client security policies. No data is extracted or transferred outside agreed workflows.

Service Rates — Fully Explained

Every rate is all-inclusive. Project management, independent QA, specialist training, progress reporting, and error correction cycles are bundled into every engagement at no extra cost. The ranges reflect task complexity, language requirements, and specialist skill level — explained for each service below.

Service	Rate	What Drives the Range	Includes
AI Data Services — Computer Vision	\$2 – \$10 / hr	Lower end (\$2–\$4): image classification, basic bounding boxes, single-label tagging. Higher end (\$6–\$10): polygon segmentation, keypoint detection, video frame annotation, semantic segmentation.	Bounding boxes · Polygon segmentation · Keypoints · Image & video classification · Semantic segmentation
AI Data Services — Language AI / NLP	\$2 – \$10 / hr	Lower end (\$2–\$4): sentiment labeling, intent classification, binary text categorization. Higher end (\$6–\$10): multilingual annotation, SFT dialogue structuring, toxicity nuance review, complex NER.	Text annotation · Intent labeling · NER · Sentiment analysis · Prompt evaluation · Response ranking
AI Data Services — Audio & Speech	\$5 – \$10 / hr	Lower end (\$5–\$6): clean single-speaker transcription, standard English. Higher end (\$8–\$10): multi-speaker diarization, accented or noisy audio, emotion labeling, multilingual.	Transcription · Speech annotation · Speaker identification · Audio classification · Multilingual

Service	Rate	What Drives the Range	Includes
Human-in-the-Loop AI	\$5 – \$15 / hr	Lower end (\$5–\$8): model output review, binary safety classification, basic preference ranking. Higher end (\$10–\$15): complex RLHF, multi-turn dialogue evaluation, red-teaming, domain-expert model assessment.	Model evaluation · RLHF · Preference ranking · Content moderation · Ground truth · Data auditing
BPO & Back-Office Services	\$3 – \$7 / hr	Lower end (\$3–\$4): data entry, form processing, CRM updates, standard web research. Higher end (\$5–\$7): complex query handling, document extraction, lead validation with scoring, research synthesis.	Data entry · Document processing · Research · Lead generation · CRM updates · Virtual assistance

Everything Below Is Included in Every Rate — At No Extra Charge

Dedicated Project Manager · Independent QA team · 100% output review
Specialist training & certification · Daily progress reporting · Error correction cycles
IAA metrics · Final QA report · Post-delivery support
You pay the hourly rate. Everything else is our responsibility.

Volume Pricing Tiers

Monthly Volume	Discount	What You Get
Up to 499 hrs/month	Standard rate	Full managed service, 100% QA, dedicated PM and QA team
500 – 999 hrs/month	5–10% discount	Priority scheduling + faster error resolution SLA
1,000 – 2,499 hrs/month	10–15% discount	Dedicated team pod + real-time reporting dashboard
2,500+ hrs/month	Custom pricing	Fully negotiated rate + embedded account manager + ESG impact report

Social Impact & ESG Credentials

BDH is a dual-impact enterprise. Your contract is not just an outsourcing arrangement — it is a measurable investment in economic development, youth employment, and community welfare in Kayole, Nairobi. ESG impact reports are available for corporate compliance.

70–80% of Revenue

Paid directly as wages to youth operators in Kayole

5–10% of Revenue

Funds Baraka basic needs & community programmes

ESG Reports

Available on request for corporate compliance reporting

Next Steps

1

30–Minute Discovery Call

We align on your operational requirements, workstream types, volume, quality expectations, and any platform or compliance constraints. No sales pitch — a technical conversation.

2

Pilot Agreement Issued Within 24 Hours

A tailored pilot scope and one-page agreement are issued within one business day. Scope, success criteria, team composition, and QA benchmarks are all defined upfront.

3

Production Partnership on Your Signal

If the pilot meets your objectives, we activate the production deployment plan together. Scale from 5 to 80+ specialists with the same team, same QA standards, same PM — and no pressure to proceed until you are fully satisfied.

Ready to Begin?

Baraka Digital Hub is an AI Data Services and BPO company.

We are built to become a reliable, accountable extension of your team — through structured management, independent QA, and transparent delivery. Contact us to schedule a discovery call and receive your pilot scope within 24 hours. projects@barakadigitalhub.com · +254 769 258 118 · www.barakadigitalhub.com
